

REPAIR & MAINTENANCE

MII Operational services provide professional repair and maintenance support that can be individually configured to match customers' existing and future requirements. We have extensive experience operating across a broad spectrum of industries. We maintain and develop a positive, challenging philosophy which endeavours to continually improve our services.

Our professional and comprehensive range of Repair & Maintenance services offer full back up and support from design, installation, commissioning, testing and inspection across a wide range of industries from power stations to process manufacturing.

We have comprehensive experience and knowledge of all facilities services and equipment. We can offer a service support option tailored specifically to our customers' requirements. We offer small or full works packages for repair, maintenance and comprehensive refurbishment. In our industry a full complement of system accreditation 9001, 2000, 18001 & 14001 is both vital and expected as it supports the Management Systems in delivering customer consistency, visibility, traceability and confidence.

We routinely work in:

- Metals sectors: steel, aluminum, stainless, special alloys & precious metals recovery.
- Paper & plastics.
- Automotive.
- Aerospace.
- Cement, aggregates & minerals.
- Food.
- Power & utilities.
- Pharmaceutical.
- Chemical (COMAH).
- Health care.

What our clients rely on & receive from us is:

- A history that dates from 1985, offering experience in traditional and modern manufacturing plants.
- A strong financial foundation to fully support and resource small to large companies and businesses with engineering and maintenance requirements.
- An extensive range of engineering experience to support cost effective repair & maintenance which extends to the life of the equipment and upgrades.

REPAIR & MAINTENANCE

REPAIR & MAINTENANCE

The potential to improve operational efficiency is uppermost in every Plant Manager's mind and MII Ltd offers the expertise, capability, flexibility and resources to implement and deliver a maintenance strategy, specifically tailored to your company needs. Our focused, flexible, planned and preventative maintenance approach will improve plant performance resulting in a positive impact on your financial performance.

Typical Planned Shutdowns and Execution requirements:

- Review of clients needs.
- Quality assurance of all spares required for down period (quality plans).
- Detailed planned programmes of work (Microsoft project Primavera).
- General planning and co-ordination.
- Preparation of Risk Assessments and Job Methods.
- Work load labour assessment and resource requirements.
- Preparation of test and inspection plans.
- Interface control.
